

H

DEFENDING YOUR DATA

Content is the lifeblood of every organization. The way we create, consume and communicate it has radically changed in the last several years – and so must the security systems we use to defend it. Today attacks on company data are more sophisticated and targeted, and most are aimed at stealing precious data. Every channel of communication is vulnerable; from email and mobile computing devices to a multitude of web-enabled technologies. If it's hard for large, sophisticated businesses to keep up with the latest security challenges, it's an even more daunting task for smaller and medium sized businesses.

INFORMATION SECURITY Summit 2013

Please join us for this timely forum on what you need to know about the latest security issues, threats, and technologies that will help you protect your business!

KEYNOTE SPEAKER

David J. Sherry CISSP CISM
Chief Information
Security Officer
Brown University

David Sherry is the Chief Information Security Officer at Brown University, with university-wide responsibility and authority regarding matters of information security and privacy. He leads the Information Security Group, charged with the development and maintenance of Brown's information technology security strategy, IT policies and best practices, security training and awareness programs, as well as ongoing risk assessment and compliance tasks. David came to Brown in 2008 with over 20 years of experience in information technology. He most recently worked at Citizens Bank where he was Vice President for Enterprise Identity and Access Management, providing leadership for compliance and security governance. David sits on the EDUCAUSE Higher Education Information Security Council, is a frequent contributor to Information Security Magazine.
